Description	A trilobular thread forming screw with a machine screw's thread pitch. As each lobe of the screw moves through the pilot hole in the nut material, it forms and work hardens the nut thread metal, producing an uninterrupted grain flow.	
Applications/ Advantages	For use in drilled, punched or cored holes in ductile metals and punch extruded metals. They provide superior prevailing torque than can be achieved with most locking screws. Eliminates chips that result from using thread cutting screws. Requires low drive torque and provides excellent resistance to vibrational loosening. Since these thread rolling screws are case hardened, it is not recommended they be used in die-cast or extruded aluminum or zinc.	Can be used to roll threads in aluminum or non-ferrous materials.
Material	Carbon Steel	Stainless
	AISI 1022 Steel	A2 Stainless Steel
Surface Hardness	450 HV 0.3 Min.	-
Case Depth	M2 & M2.5: 0.05-0.15 mm M3 & M3.5: 0.07-0.18 mm M4 & M5: 0.10-0.25 mm M6 & M8: 0.15-0.28 mm	-
Core Hardness	M2 - M3.5: 290 - 370 HV 5 M4 & larger: 290 - 370 HV 10	-
Torsional Strength	Torque required to cause failure shall be equal to or greater than breaking torque values shown in above table.	
Tensile Strength	Tensile force required to cause failure shall be equal to or greater than breaking force values shown in above table.	
Plating	Thread rolling screws shall have a zinc finish with a wax coating. For more details see Appendix-A.	Stainless thread-rolling screws are typically passivated with a wax coating.

Thread Rolling Screws
Head Dimensions to DIN 965 & 7985
